

FASTERHOLT

FASTERHOLT

FM 4900H

Fasterholt Maskinfabrik is the world's leading manufacturer of self-moving irrigation machines.

Straight out and in soft curves

One of the great advantages with self-moving irrigation machines from Fasterholt Maskinfabrik is, that they cannot only irrigate in straight tracks, but also in soft curves.

Hydraulic pull

The hydraulic pull for winding up the hose ensures that it is always optimally positioned.

Traffic lights are standard

All Fasterholt machines are today, as standard, equipped with traffic lights. Reflectors are optional equipment.

Only three 90° bends

This machine is equipped with an overpressure stop (can be equipped with underpressure). Also visible is the valve and electric motor for by-pass for speed regulation. Note that the water must only pass through three 90° bends before it comes out of the cannon.

Technical data for FM 4900H:

Size of hose:	max 800 m/110 mm – max 650 m/125 mm
Total length:	9.20 m
Length without pull:	6.85 m
Height:	4.20 m
Total weight without water:	5,964 kg
Wheel gauge:	middle-middle: 2.00/2.25 m
Size of wheels	rear wheel: 16.9/14x30" front wheel: 400/60x15.5"
