The machine is equipped with a hydraulic operated turntable where a flow limiting system provides a safe and steady turning of the drum. In order to prevent unintended turning, a locking system is placed on the chassis. The hoses are hidden into the chassis to preserve the nice design of the machine.

All important mechanical and electronic items are placed on the side of the machine. A shield is protecting the computer from the sunlight. All necessary instructions for the operation of the machine are placed on the screen, as well as the coupling engaging and disengaging the machine and the shaft for pulling in the hose by PTO.

The machine is designed so that water can be connected in both sides. The chassis is fully galvanised. The valve for operating the turntable, gun hoist and hydraulic support legs is placed at the front. Hydraulic jack is optional. Choose between a drawbar with fork type or hitch type.

Notice the solid 3-wheeled fully galvanised gun wagon, which can be equipped with either a hitch or a hook for out-pull. The machine has 3 different safety stops consisting of a stop bar, a wire stop system and an additional bar preventing errors in winding up the hose.

The machine can be equipped with stop for either high- or low pressure. The electronic motor driving the control system is placed visible. A valve makes it easy to adjust the flow through the turbine. The turbine drives the machine through the system of chains and a V-belt with 2 pcs of 3 track pulleys in order to obtain maximum effect of the turbine. This machine works very silently.

Technical data:	10TT	12TT
Size of hose:		
Ø mm up to max length/m	110/500 K	110/550 K 125/400 125/440 K
Size of wheels:	14/65x16	14/65x16
Wheels for gun wagon:	6" x 9"	6" x 9"
Length without gun wagon:	5.20 m	5.20 m
Width:	2.60 m	2.60 m
Height:	3.90 m	3.90 m
Max weight without water:	4,800 kg	5,200 kg
